## Data Explorer Full Version PC/Windows

"Data Explorer", "Data Explorer ACCESS", "Data Explorer CLX" and "Data Explorer FLT" are not 100% compatible. I do NOT recommend using "Data Explorer ACCESS" or "Data Explorer CLX" with Microsoft SQL Server. Use these tools with "Data Explorer FLT" only. □ Make sure to install the Free "Data Explorer FLT". Get it at: □ Make sure to install the ACCESS Database Engine Redistributable. Get it at: □ Free ACCESS Database Engine Redistributable can be downloaded at: □ "Data Explorer" has a minimum Windows 2000 SP4 or XP SP3, XP SP1, Vista SP1, 7 and 8 requirement. If your version is not supported the tool will not show in the start menu. Data Explorer "FLT" has an even lower Windows 98, Me and 95 requirement. □ "Data Explorer FLT" is a free product. And "Data Explorer ACCESS" is a \$14.95 product. □ This is a program that allows you to browse, copy, paste, sort and run SQL queries in your windows desktop. It is not a database engine or a database management system. □ It can sort, format and print almost any kind of database. Flat text files, Excel, Access, Word, Power Point, Visio, PowerPoint, MSAccess and other Windows graphic formats are supported too. □ The first main window opens a single ACCESS Table, Query or Form. You can open more windows when you press the "New Window" button on the toolbar. You can drag and drop and copy/paste data and queries to and from windows. □ You can define and run all the popular SQL statements. □ You can copy, paste and use your saved queries and do instant sort/search/statistics on any query. □ The window is Windows Multitask capable, so you can have it running and another window open, side by side. The window can be always above all other windows ♦

If you just want to look at the Database file content, then it is fast and easy to do with Data Explorer. If you want to explore the Database file structure and use functions and procedures to navigate the Database file contents, then it is much more powerful. Data Explorer is completely interactive and does not require you to do any coding. Unlike other open source programs, Data Explorer comes with all the features you need to work with any ACCESS Database file.
